

SBR Architectural and Landscaping Committee

Section of Screening Fence and Requirements

Requirements:

Mesh must be 1/4" square and 23 gauge.

Attach mesh to the inside of the fence.

5 ft fence - Tack mesh at the top, middle, and bottom of each section of uprights.

6 ft fence - Tack mesh evenly in 4 locations on each section of uprights.

Paint mesh and bar stock black (or Chocolate Chunk if in Unit 46A).

If there is no masonry base, the mesh may be buried into the ground.

Any seam in the mesh must be aligned along a bar, either horizontal or vertical.

Adding screen fencing to a shared existing metal fence requires a permission letter from your neighbor.
